This is a pretty decent pack, but it's a really different style from the default tilesets and other dlc tilesets. It's not a bad pack at all! Just not really good if you're planning on combining tilesets; you'd have to do the entire game in this tileset.. The graphic side of this is sick! Lots of useable assets if you want some unholy abominations and interesting-looking humans to creep people out. It has sprite sets for each battler. The BGMs are slow and mostly ambient- good if you want to just set a creeping horror, and work perfectly if you want to stay true to Lovecraftian style.. These graphics are great and there a lot of options available. The amount of different poses in each sprite opens up a lot of doors. One thing to note though, none of these graphics match the style of the RTP at all so if you plan on using this resource it's going to be difficult to accompany it with anything else unless

you make additional graphics yourself.
